

ACTION FOR HEARING LOSS

Make a Sound Investment

Need for action on hearing loss

Unaddressed hearing loss poses a high cost for the economy globally.

\$750
billion¹
annually

Annual **cost** of
hearing loss¹

Annual
combined health
expenditure of
Brazil and China²

GDP of the
Netherlands²

¹ WHO estimates 2016, cost in International dollars

² In US dollars, source: World Bank report, 2015

Recommended actions

Decision-makers can address hearing loss by:

- Allocating suitable resources
- Integrating ear and hearing care into health systems
- Building human resource capacity
- Implementing early identification and intervention programmes
- Increasing awareness among all sectors of society

Inaction comes at a **high cost**¹

Annually, unaddressed significant hearing loss³ results in:

Health care system cost, other than the cost of hearing devices:

\$67–107 billion

Loss of productivity, due to unemployment and premature retirement:

\$105 billion

Societal cost, as a result of social isolation, communication difficulties and stigma:

\$573 billion

Cost of additional educational support to children with hearing loss aged 5–14 years:

\$3.9 billion

"Persons with significant hearing loss are twice as likely to be unemployed as hearing persons in Europe."

(Shield, 2006)

"People with untreated hearing loss earn 50–70% less in the United States."

(Monteiro et al, 2012)

"Hearing loss related unemployment costs the UK economy an estimated £24.8 billion per annum."

(UK Commission on hearing loss 2014)

¹ WHO estimates 2016, cost in International dollars

³ greater than 50dB hearing threshold in better hearing ear

Action is **cost-effective**

Evidence shows that it is cost effective to:

Prevent hearing loss by:

- Protecting against loud sounds
- Identifying and treating otitis media (ear infections)

Identify hearing loss early through screening of:

- newborns
- school children
- adults above 50 years

Provide rehabilitation together with support for continuous use of hearing aids

Improve access to cochlear implants

Captioning and sign language interpretation are effective in making information accessible to deaf and hard of hearing people.

Action benefits individuals

Interventions have a real impact:

'Every day that goes by I thank God for the wonderful doctors who diagnosed my child's hearing loss soon after he was born. I am ever so grateful for the great invention of cochlear implant, a miracle that has allowed my son to hear the world.'

Mother of Godrey, Russian Federation

'As a child with no language, I often felt agitated, fearful and totally isolated. I had my first experience with sign language at the age of nine and it completely transformed my life. Now, I feel confident, complete and proud to have a language of my own!'

Halima, Uganda

'Hearing aids have allowed me to re-enjoy life. I can enjoy music, I can speak with my children and family. I feel like all the colours have come back into my life.'

Javier, Guatemala

'Captioning is a cost-effective and universal means of communication. As I am hearing impaired, captioning allows me to participate in meetings and discussions. It is also beneficial for those who can't hear well in a noisy environment.'

Tuya, Mongolia

Action benefits society and countries

Interventions to address hearing loss result in:

Financial savings and significant return on investment

Increased access to education

Greater employability and earnings which benefits the economy

Lower costs related to depression and cognitive decline

An integrated society

'In 2009 the Government of Philippines passed a legislation that has made universal newborn hearing screening mandatory across the country. This has resulted in a saving of 1.4 million pesos for each hearing impaired child receiving early intervention.'

Charlotte Chiong, Philippines

"Cochlear implantation not only improves quality of life but also translates into significant economic benefits for patients and the Canadian economy."

(Monteiro et al, 2012)

"Cochlear implants significantly increase the quality of life of hearing impaired children in India."

(Drennan et al 2015)

"In the United States, for each dollar invested to treat a hearing impaired child with cochlear implants, there is a return on the investment of US\$ 2.07."

(Penaranda et al 2012)

*Hearing aids have
allowed me to
re-enjoy life*

*Captioning allows
me to participate
in meetings and
discussions*

*My hearing loss
could have been
prevented had
I simply turned
down the volume*

*A cochlear implant
has allowed my
son to hear
the world*

*Learning sign
language has made
me feel confident
and complete*
